Mr. Tom Woodbeck
President
Overhead Conveyor Company

Dear Mr. Woodbeck:

The production lines at Ford Motor Company's Kentucky Truck Plant (KTP) are ramping up as planned for the F-Series Super Duty, and the Expedition/Navigator Sport Utility vehicles. On behalf of Vehicle Operations Manufacturing Engineering (VOME), I want to personally thank you and your team for the extraordinary effort put forth in making this project such a success. This has been one of Ford's most challenging and demanding projects, allowing only five months to develop and execute the extraction and integration of the Expedition/Navigator tooling into KTP. This success would not have been possible without your team's complete cooperation, dedication, and hard work.

Ford has developed an ambitious cycle plan of impressive new products and consolidating Expedition/Navigator production into KTP was an important step in freeing-up capacity for key future products. Ford Motor Company is sensitive to how aggressive the timing and cost targets were for this project, but it was necessary to support Ford's overall manufacturing plan. As a supplier on this project, Ford Motor Company recognizes and appreciates your effort and your team's personal sacrifice toward achieving this successful outcome. Thank you for a job well done!

Please pass this thank you along to your team members who were associated with the success of the M2K project.

Sincerely,

Linda Ca\$h
